

The streamlined and efficient future of education

NTT DATA can help your university create a more streamlined, connected and seamless approach to education processes, powered by cloud, advanced networks, data and AI, enabling your institution to perform at a higher level and be more competitive. We will create new foundations for a more dynamic and agile approach to the university itself.

What we deliver

- **Hybrid and flexible cloud:** By implementing advanced cloud infrastructures to support the university's complex data and workload requirements, we enable operations to be more scalable and flexible.
- **Secure and assured delivery:** With comprehensive cybersecurity, the most agile and flexible cloud-based operations are assured, so student, research, welfare and financial data are protected.
- **New digital architectures:** NTT DATA can bring all aspects of a digital infrastructure together, tying networks and data flows into cloud across key applications and processes and into the workplace, thereby developing a single, fluid and seamless architecture for the university of the future.

Benefits to the university

- **More secure, more compliant, more resilient:** The university becomes as secure and robust as any private enterprise, with advanced security and

multilayered support. Strong zero trust, secure-by-design networks protect students, staff, researchers and critical data. Built-in compliance and reporting means that even nonsecurity and IT personnel know that everything they do is meeting regulations.

- **Fast-scaling to needs:** With cloud and high-powered networks having security built in, students, staff and researchers can use content and run processes as needed. High availability reduces downtime, making university operations more reliable and efficient.
- **High efficiency, cost control and productivity:** With a more integrated digital architecture that's tied together from the network up to the application and beyond through our full-stack solutions, processes flow more easily and without interruption, and are inherently more robust. A single approach to architecture ensures higher integration, fewer errors and a higher return on investment.

Why you should partner with NTT DATA

- **Strength in cloud:** NTT DATA's significant cloud capabilities mean that we are well placed to transform universities to work in a more agile, relevant way.
- **Deep cyber strength:** Partnerships with leading cybersecurity providers and comprehensive, in-depth experience in delivering advanced zero trust and secure networks make NTT DATA a clear choice for flexible, robust security solutions.
- **Full stack, full capability:** Our comprehensive solutions ensure unified digital architecture and complete integration, from the network up, for critical operational processes and applications. That means high agility, adaptability and precision.
- **GenAI strength:** With IP and frameworks for the rapid development of GenAI use cases, and tools to optimize and manage GenAI delivery, NTT DATA is perfectly positioned to support universities to deploy the cutting-edge technology that will make their operations more efficient and productive over time.

Solutions and services

- **Full cloud implementation and application transformation and migration:** We give you the ability to migrate the most complex applications to cloud, and transform and adapt to work more effectively in the cloud.
- **Campus communications and networks:** We can create advanced, integrated networks from the ground up.
- **AI and automation:** NTT DATA has strong capabilities and complete solutions in every aspect of process automation. We can turn complex processes into adaptable, automated, less cost-intensive workflows.
