The definitive Microsoft Teams Deployment Checklist

In talking to customers about their Unified Communications and Collaboration journey, it’s evident that many are stepping onto the Microsoft UC platform which is Microsoft Teams. Most of the time, this decision is made because they have chosen Office 365 (O365) as their productivity suite.

Many small and medium companies have already bought O365 licenses and migrated or are in the process of migrating their on-premise or third-party emails into Exchange Online as a first step. The natural evolution of this is to enable other features in O365 like OneDrive, One Note, SharePoint, and Teams/Skype for Business Online in order to take advantage of the full O365 suite.
Knowing and planning is crucial for success:

For customers who don’t have either Skype for Business on-premises or Skype for Business online, it’s natural to choose and deploy Teams as their collaboration platform. Before deploying Teams, **here are some important considerations to ensure successful and sustainable usage.**

- Define your business requirements and use cases. Do the fit analysis.
- Plan and define OneDrive, SharePoint and Office 365 group strategy before deploying Teams.
- Where is data stored? How much storage is required for Teams? What will happen to data inside Teams?
- How do Compliance Content Search and eDiscovery work for Teams?
- How do I do Auditing and Reporting for Teams?
- Who can create Teams and what are the guidelines for creating and managing them?
- What will happen to the users’ experiences with audio and video conferencing, room-based video integration and devices strategy?
- How do I enable telephony and when do I do this? What will happen to existing PABX?
- What kind of network bandwidth is required for Teams?
- What type of Organizational Change Management programme is required to deploy teams?
- Do we have defined KPIs established and monitored? How to monitor voice quality and end-user adoption?
- Is my helpdesk prepared to support Teams and know tips and tricks?
- Are my Admins trained on O365 workloads and what is the escalation matrix in case of issue resolution?
- Do we need to do a managed pilot before we deploy for the entire organization?

We are committed to delivering the optimal experience to customers who would like to take a Microsoft Teams journey. **We help answer all the above questions through our range of service offerings.**
