

Managed Networks

# Managed Cisco Catalyst Center

Powered by SPEKTRA

# Services overview

## Improving network performance

This cloud-based network automation and management solution is built on Cisco \*Catalyst Center. Enabled through a Cisco appliance, Catalyst Center acts as the brain of the network. By centralizing and automating network management, it helps to streamline network operations, reduce downtime and improve overall network performance. To help you realize the full potential of Catalyst Center state-of-the-art network management functionality, the operation of your network infrastructure is supported by NTT's extensive technical resources and expertise. Enhanced analytics and insights are delivered through NTT's managed campus networks platform, which is integrated with Cisco Catalyst Center and facilitated through an additional layer of advanced AIOps and automation.

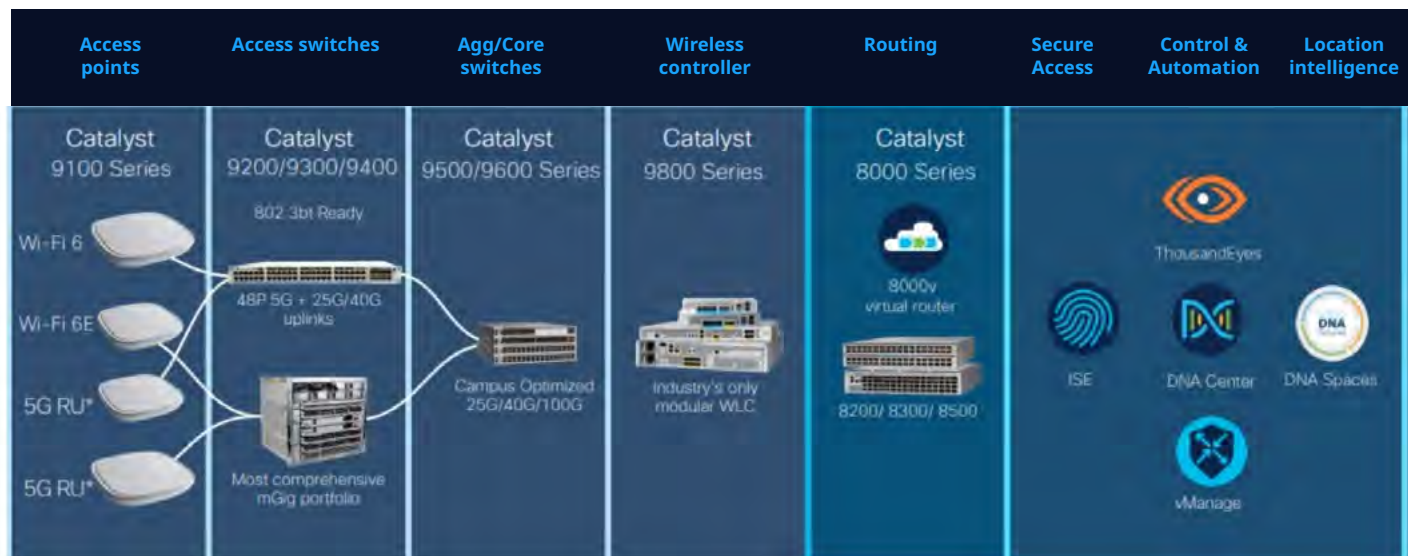

\*Catalyst Centre formerly known as DNA Centre

# Solution features:

- Fully integrated, end-to-end managed service
- Unified services portal with enhanced visibility
- Design, support, delivery and lifecycle services
- Comprehensive managed services
- Adjacent NTT managed service options

## Unlock the full potential of SPEKTRA functionality for a more efficient and better-performing network infrastructure

### Key benefits

**Real-time analytics** enabled by an additional layer of **AIOps and automation** to help administrators quickly **identify and resolve network and security issues** before they become major problems.

The **automation of routine network tasks**, such as device provisioning, configuration and troubleshooting, helps reduce the workload of network administrators and engineers.

**Enhanced network automation** capabilities results in **reduce downtime** caused by manual configuration errors and troubleshooting.

**Centralized management** allows administrators to **manage multiple sites** from a single dashboard, which simplifies network management and reduces the need for on-site visits.

**24x7 proactive management and operation** to ensure that the network is always running smoothly.

Extensive **technical expertise** to manage and support the solution, which eases the pressure on your in-house IT staff and resources.

Reduced risk moving to modern infrastructure that improves your security posture.

**Catalyst Center acts as the brain of the network, enabled through a Cisco appliance, that functions to centralize and automate network management**

## Why NTT Managed Cisco Catalyst Center

- Integrated and optimized design to improve operational efficiency.
- Reduced complexity to help focus on your business objectives.
- Holistic network view.
- Advanced AI-driven correlation and anomaly detection drives better performance.
- >85% incidents proactively detected resulting in improved network availability.
- Enhanced insights and analytics enabled by rich telemetry and APIs.
- Managed solution helps you realize the full potential of Catalyst Center.

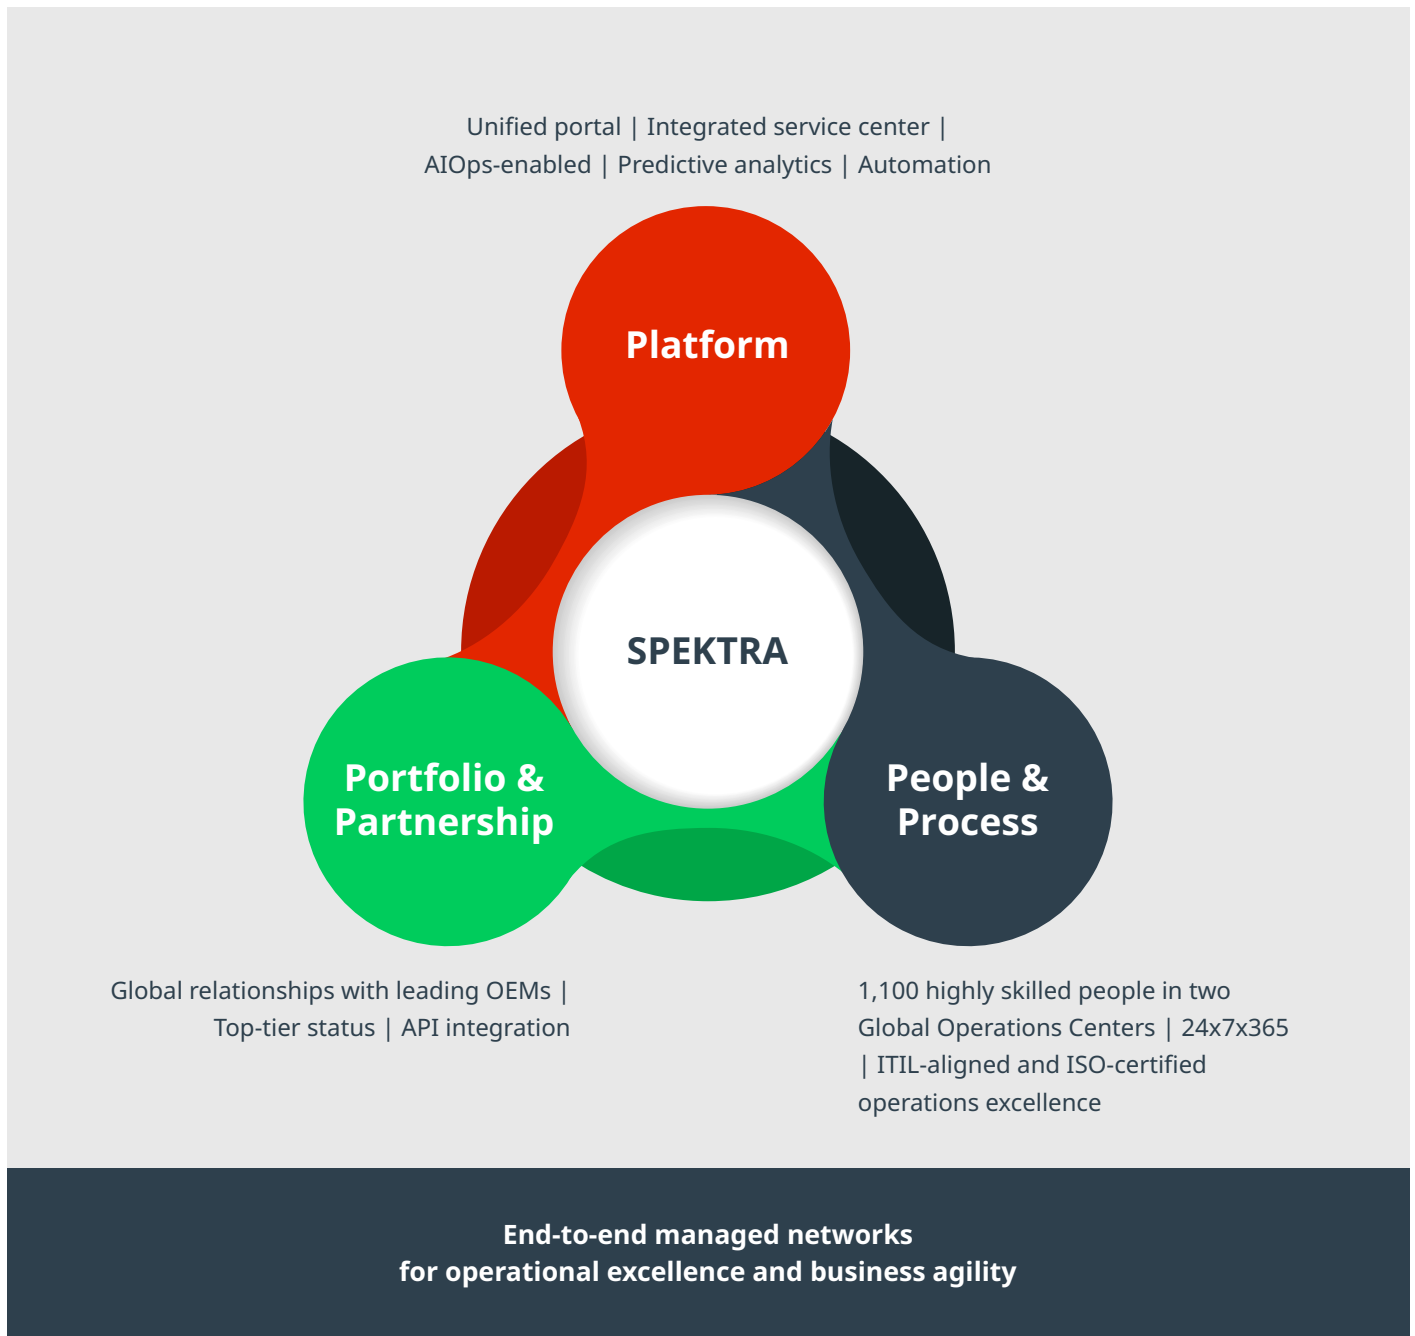

“

NTT's Managed Cisco Catalyst Center offering is designed to meet a growing demand for advanced AIOps features, which are valued for their ability to simplify network management tasks, provide greater visibility and preemptively troubleshoot network issues. Cisco is the market leader in enterprise WLAN and campus switching, which makes Catalyst Center a powerful addition to NTT's Managed Network service.

Siân Morgan, Wireless LAN Research Director at Dell'Oro Group.
