

Design and Implementation Services

Seamless implementation of new technology into your environment

Reduce risk, minimize operational **disruptions and accelerate time to value.**

Our industry-certified design and implementation methodologies help clients deploy and integrate technology solutions into their environment to accelerate the time to value for their investment.

NTT's Design and Implementation Services focus on unlocking the business value of your technology investments.

We start by giving you a thorough understanding of the current state and capabilities of the technologies being deployed. We then develop a plan to ensure they are installed and configured to deliver the outcomes you need.

On your approval, we execute the plan to integrate the technology into your environment before handing over to your support teams.

Business outcomes and benefits

Reduced risk and accelerated time to value for technology investments:

Using our experience in design and deployment reduces risk and decreases the time it takes to realize the value of your technology.

Seamless integration and operational handover:

Accelerate time to value for technology investments and modernization initiatives.

Global consistency in delivery:

We use the same approach to execute projects and ensure quality outcomes anywhere in the world.

Offload technology onboarding tasks from in-house staff:

Minimize disruption to your day-to-day operations by offloading implementation tasks to skilled, external resources.

As the technology industry moves from pure hardware-delivered solutions to software-defined, **our expert teams can help you implement a best-of-breed solution covering all vendors in your environment.**

Key features

Flexible service capabilities to suit your individual requirements

Access to global expertise

You'll be working with highly skilled resources who have implemented your solution in complex environments in a wide variety of industries. With delivery professionals in every region, we can ensure global consistency – and give you the best resources available for your project.

Best-practice implementations

Our Design and Implementation Services are based on proven technology reference architectures and use cases, leveraging industry-leading development models and methodologies.

Multivendor architectural approach

We have expertise, skills, and certifications across a broad array of hardware and software vendors.

Why NTT

01

Specialized expertise

More than 1,200 technical service engineers with a combined total of more than 11,000 certifications.

02

Multivendor support

Skills and certifications for a broad array of hardware and software vendors.

03

Proven methodology

Standardized global methodology based on more than 30 years of experience.

04

Your service, your way

Choose one or several implementation options, or use our end-to-end implementation service, from staging through to knowledge transfer.
