

# Cloud Modernization Services: from discovery to innovation

Accelerate time to value, improve client engagement and lower your total cost of ownership so you can reinvest in innovation with the right cloud-native modernization and migration strategy.

**Get modernization right with NTT DATA.**

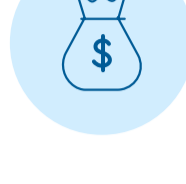

## Business imperatives for cloud modernization

Enterprises view cloud-native as the primary advantage for hosting modern applications.

### Operational efficiency

**62%** of enterprises rate application modernization as a high or top priority.\*

### Opex savings

Cloud migration drives **33%** opex savings.\*\*\*

### Innovation

Enterprises estimate that **43%** of their application portfolios are managed using site reliability engineering (SRE) methodologies.\*

### Observability

**53%** of enterprises rate digital monitoring and 35% rate application performance monitoring as a top observability priority.\*\*

\*IDC InfoBrief, *Realizing the Promise of Cloud with the Right Strategy*, June 2023

\*\*NTT and Cisco report, *How observability can benefit the user experience*, August 2023

\*\*\*NTT DATA case study, January 2023

**4,200 highly skilled experts across 5 continents partnering with clients to realize the value of cloud. That's us.**

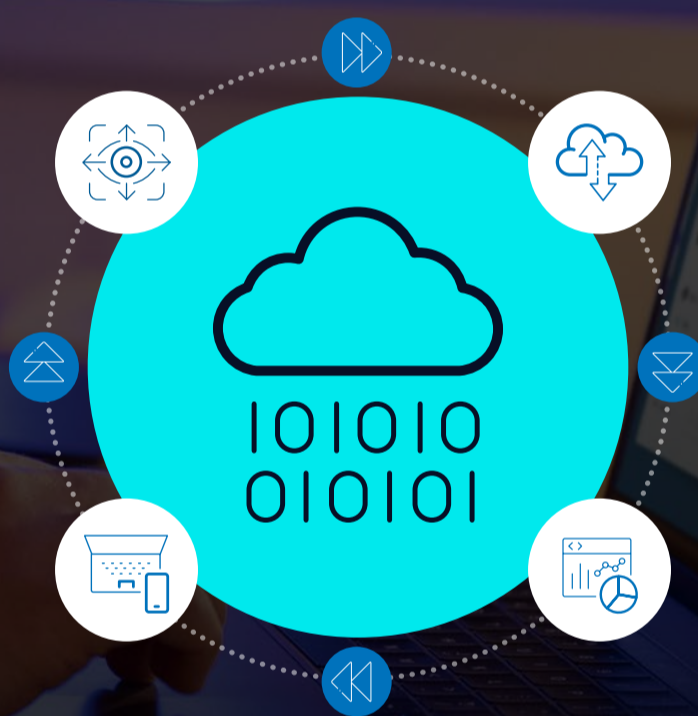

## NTT DATA's Cloud Modernization portfolio

### Site reliability engineering and observability

Our site reliability engineering (SRE) services support the entire cloud-native development and management lifecycle and overall business operations through a combination of observability, FinOps and DevSecOps, improving the cost, speed and quality of cloud-native infrastructure, applications and platforms.

### Advanced cloud transformation

A proven practice, based on a combination of people, process and technology, far more than helping you "transition", our transformation services are designed to help you simplify cloud complexity, mitigate cloud migration risks, and ensure you get the most out of your cloud investments.

### Cloud-native modernization and management

Tap into the full potential of the apps you use. With a focus on microservices and replatforming, our cloud-native modernization capabilities will help you break away from traditional monolithic frameworks and breathe new life into your application ecosystem, yielding improved agility, scalability and flexibility.

### Enterprise applications and packaged applications

Increase the efficiency of your business operations with purpose-built services designed to improve the effectiveness and performance of your enterprise applications.

## Modernization investments are producing results

Increased application performance

Reduced total cost of ownership

Improved risk posture

Accelerated speed to market

Increased platform reliability, scalability and security

Modernization and continuous innovation

## The NTT DATA difference

**Why partner with us on your cloud journey**

**25%** average cost savings with our Cloud Economics services

We mitigate **2 billion** threats annually

**20% - 30%** cost reduction from simplifying multicloud complexity

We're recognized as a **leader for SAP S/4HANA Application Services** by a leading analyst firm

**Improved business performance** with application migration and modernization offerings

Get it right with

## NTT DATA's Cloud Modernization Services

Dramatically boost the speed and quality of your releases with optimized cloud performance and agile, product-centric build, deployment and maintenance practices.
