

# Private 5G as-a-Service

Fast. Secure. In your control. Everywhere

Mission-critical applications increasingly need continuous connectivity, zero latency, and high-capacity networks. With private 5G from NTT, we meet your needs for transformation, compliance, and security, along with global availability, seamless integrations, and flexible as-a-Service delivery.

## Positioning you for future success

**Increase security and business assurance while minimizing risk** across your organization. We keep your IP safe with secure, reliable connectivity and communications

**Grow your business globally with complete scalability.** Deliver custom apps at scale, drive collaboration, and unify insights

**Improve your business agility and responsiveness,** spinning up new capabilities quickly and empowering your IT teams with insight

**Control and manage your network development and delivery,** to prioritize key apps and features for enhanced service delivery

**Get exceptional performance with low latency delivery, zero lags and 24/7 availability,** powering business performance across critical use cases

**Deploy, adapt, and transform your 5G network,** to drive business outcomes and leverage advanced new capabilities

## Our private 5G-as-a-Service platform architecture

As your turnkey private 5G network partner, we can help **increase security while reducing risk to drive growth.** We'll help increase global reach and enhance business agility, making you **more resilient and adaptable.** And we'll drive **business performance and outcomes** without impact to your systems.

## We understand what challenges you face – and how P5G helps solve them

### Need greater connectivity and control

Complete control and ownership of business development and delivery, supported by a network tailored to your priorities

### Need agility to drive transformation

P5G to extend business, technology, and capacity and respond to changing market trends

### Need to increase productivity

Continuous and constant network availability and speed enables you to do more across every area

### Need increased security and operational visibility

Network security with no threat surfaces and total industry compliance built in

## Why choose NTT for your private 5G requirements?

We understand the way your business works, supporting you to leverage wireless technology to drive transformation and scale your business

Drawing on the experience from across the whole NTT Group, we can help you navigate how your network can be used in the right way for your business, from roadmap to end solution.

### A full turnkey service

We offer unique delivery and management from a single point of control

### Total, secure integration

A seamless transfer between private and public networks and no need to rearchitect

### A global business, offering flexibility and scale

We enable you to deploy anywhere, with 24/7 support

### Robust, secure, and reliable from the ground up

We bring network-level security and advanced, business-ready capabilities

### Simple, easily upgraded, and connected architecture

We enable effortless connectivity and communication

## Next steps?

We recommend you start with our specialist Private 5G Team to assist you to gauge the impact of private 5G and build a roadmap that enables your organization to benefit from transforming your network.
