

SAP on Microsoft Azure

Migrate your SAP environment to Microsoft Azure and prepare your business for global opportunities with smart, reliable and secure managed services from NTT

Selecting the best fit public cloud lays the groundwork for successful growth and expansion.

Simplify and secure SAP management for your mission-critical applications, while keeping them up-to-date and ensuring optimal performance.

Through our extensive experience of working with global enterprises across regions, we understand how essential scalability and flexibility are. Which is why we've designed a unique process and delivery framework for our next-generation managed services. This smart, reliable and secure process is uniquely designed to help your organization with the modernization of your SAP architecture.

With mainstream support for SAP ECC ending in 2027, and all the core SAP products optimized or being currently optimized for the SAP S/4HANA database, the time is now to consider transforming your SAP platform into an agile and flexible one that will remove complexities, improve efficiencies and drive your organization's success for years to come.

With its global footprint, many of our clients have chosen Microsoft Azure as their platform to open up a world of new opportunities driven by efficiencies, innovations and business intelligence.

Scalable, customized solutions aligned to your business and technology

Optimize cost efficiencies

Move from capex to opex, and drive growth through pay as you go models.

Gain agility

Achieve agility and flexibility with Azure Virtual Machines.

Reduce risk and scale

Safeguard your SAP platform against unforeseen events with our technology.

Gain valuable business intelligence

Accelerate your business innovation with actionable data that will improve decision making.

A simple 4-step process

We enable you to leverage Microsoft Azure cloud for SAP to its fullest

Our services are designed to establish a link between your organization, its goals and the infrastructure it runs on.

Our team of dedicated specialists has extensive experience of running SAP workloads on public cloud and we've developed a proven methodology with one clear goal in mind: to add strategic value to your enterprise and your global operations.

Complemented by the unique capabilities Azure offers, we can help your organization gain a competitive edge by tapping into valuable data.

At each step of your SAP transition, our team provides IT and governance consulting, helping you benefit from this digital transformation.

SAP Assessment

Before you start off on any journey, there's an element of preparation required.

We work closely with the world's largest enterprises and are seen as a leader in the managed cloud space.

We begin SAP migrations with a two-day assessment, during which our experts gain a deep understanding of your current SAP situation, both from a business and a IT perspective. We're partners, and will start and continue on this journey together.

SAP migrations are complex, but we make sure there are no surprises. Considering how business critical on-premises systems are to your organization, it's essential to review them in detail in order to determine which workloads can be moved across to the cloud first and in the most effective way.

Our SAP Assessment will provide you with a clear overview of your current SAP setup, ultimately delivering a business case for moving your SAP environment to the cloud, and building a clear road map for your SAP transformation.

- 1 SAP Assessment**
 Providing insights into your current SAP infrastructure.
- 2 SAP cloud optimization**
 Introducing flexibility and agility into your SAP environment.
- 3 Journey to SAP S/4HANA**
 Providing the most efficient path and support.
- 4 SAP platform analytics**
 Enabling you to generate actionable intelligence.

A clear road map for your SAP transition.

Be in the know

A two day assessment will deliver all the details required before undertaking migration and will outline operational and financial benefits.

Gain detailed insights

A thorough and credible business case will facilitate internal buy-in from stakeholders, so they too will see the need for urgency in migrating SAP to the cloud.

Set up priorities

Specific SAP landscape architecture will show you where you can make the quickest gains and which workloads should be migrated as a priority.

SAP cloud optimization

Injecting flexibility, agility and cost efficiencies to your business.

At the second stage of the SAP journey, our team will prepare your business for the digital transformation.

Operating on a global scale, and managing staff and clients in different locations, puts extra pressure on your resources and on the operations driven by your SAP architecture. Moving your SAP estate to Microsoft Azure is all about modernization and future-proofing for tomorrow, allowing you to scale with ease and on-demand. Your SAP system, modernized through our proven approach, will integrate better with other systems as well as the data sources within your enterprise.

By moving test, development, quality assurance and production environments to Azure, your enterprise will speed up processes and become operationally more productive and efficient. Low disaster recovery time with our latest architecture will secure your business and limit its exposure to external and internal threats, whatever these might be.

Global reach

Available in 54 regions and compliant with 72 international and industry specific compliance standards¹, Azure enables your business to further extend its global footprint.

Scalability

Azure's robust cloud environment guarantees high performance architecture, allowing you to scale up and down capacity as your business needs dictate.

Priorities set up

Specific SAP landscape architecture will show you where you can make the quickest gains and which workloads should be migrated as a priority.

S/4HANA transition

Strategically addressing the issues that are making your business less agile.

Mainstream support for SAP ECC platform is ending in 2027, now is the perfect time to upgrade to address issues that are impacting your organization's agility.

S/4HANA on Azure now includes a new set of large instance types that delivers a powerful SAP certified public cloud infrastructure to handle the largest S/4HANA workloads.

Apart from improved performance and cost efficiencies, S/4HANA powers faster data processing, allowing you to quickly leverage the data available to you. Real-time analytics will fuel better, confident decision making grounded in solid intelligence.

Faster data processing, allowing you to leverage data more quickly.

Rapid integration

A two day assessment will deliver all the details required before undertaking migration and will outline operational and financial benefits.

Speed to market

Develop new models, test with faster POCs and easily execute upgrade cycles.

Real-time reporting

Access analytics in real-time, enabling better decision making.

SAP platform analytics

Tap into the potential offered by access to real-time data analytics.

A lack of real-time reporting means you are unable to make informed business decisions, and cost optimization is not feasible as you cannot see how your SAP platform is performing.

One of the most important benefits of migrating your SAP platform to Azure is the unlimited potential offered by being able to monitor and review your SAP platform performance. As the amount of information available to your business is increasing, the unique combination of your SAP platform and Azure will offer quick insights enabling informed decision making.

The NTT team will provide your business with a dashboard, allowing you to access real-time reporting. You'll be able to track how well your SAP platform is performing and can optimize your platform to ensure that it operates at an optimum level.

Confidently act on the data you store.

Speed up decision making

Access actionable data, providing information for better and faster decision making.

React quickly

Use data to respond quickly to market changes.

Stay competitive

Use predictions and data to retain and gain a competitive edge and to fuel innovation.

One partner, lasting impact

Partnering with a Managed Service Provider (MSP) eradicates complexity and frees up your IT team’s time to focus on other core business processes enabling three important business benefits: productivity, flexibility and predictability. These contribute to reducing costs, increasing agility and enhancing accountability across the enterprise. Through seamless management, deployment and maintenance of SAP platforms on a global scale, and onto public cloud, NTT solves the world’s technology challenges by helping enterprises overcome complexity and risk in their ICT environments with managed IT infrastructure solutions. These solutions are backed by our worldwide infrastructure, including industry leading, global tier-1 public and private networks reaching over 190 countries/regions, and more than 400,000m2 of the world’s most advanced data center facilities. Our global professional services teams provide consultation and architecture for the resiliency and security required for your business success, and our scale and global capabilities are unsurpassed. We are also a Microsoft ExpressRoute partner.

NTT Ltd. helps enterprises define their global IT strategy, solve complex IT challenges and ensure they remain compliant with SAP software levels. If your organization relies on IT to make a positive difference to your bottom line and the customers you serve, then your strategic partner of choice should be NTT Ltd.

SAP and Azure certification

NTT is one of only eight globally appointed companies to hold the coveted SAP on Azure Advanced Specialization.

Cloud Management Platform

Discover and manage all solutions through a single pane of glass, with automated remediation and guided self-service.

Continuous SAP compliance

So that you can remain supported by SAP, we ensure our customers are always compliant with SAP software levels.

Consultancy Services

Benefit from strategic IT and governance consulting, providing valuable recommendations for your digital transformation.

Worldwide presence

We are a global company with a local presence, supporting our customers with local market knowledge.

Reliability and Agility

Trust a brand that has the agility of a small and focused company, that always goes the extra mile.

Global network and data centers

We have a network of 140+ data centers worldwide, and a cloud ready, software-defined network infrastructure.

Full Service Management

Leverage infrastructure, networks and applications through our 24/7 global operations model.

Contact us

Agile and flexible technology services that deliver business outcomes aligned to the goals of your organization.

Through our intelligent, platform-based services, we deliver solutions with agility and scalability. NTT simplifies the management of your day-to-day operations, across multi-vendor hybrid IT environments. Our global integrated portfolio of capabilities helps you create, build, manage, and innovate at every stage of your organization’s journey.
