SDWAN Premium

powered by Cisco Viptela & Cisco Umbrella

Securely connect any user, any application, anywhere, with the power of the cloud.

Do you need to connect your organization with a more agile, manageable, cost-efficient WAN?

Are you unsure how to get the right balance between security and user experience?

Do you need help to maintain choice and control while connecting a cloud first world?

Our SDWAN premium solution combines Cisco Viptela and Cisco Umbrella with our services to provide clients with an essential tool for enterprise digital transformation. We'll help you address the costs related to increased network bandwidth and deliver collaboration tools for your end users.

It'll help you centralize cloud management, making it easier to deploy SD-WAN and security to users, devices and applications faster, with the best threat intelligence.

We'll guide you through each step of the process, from discovery workshops to project delivery. Together, we'll create a solution that fits your business - making it more intelligent for a connected future.

This solution has been created for organizations where cloud is an integral part of the technology strategy - driving innovation and connecting users, devices and applications, anywhere.

Key facts

With Secure SDWAN

- **4.6 hours** to detect a threat on a network
- **5x improvement** in Office 365 performance for a healthcare company using Cisco SD-WAN
- **USD 20 million** reduction in OpEx over three years for a retailer using Cisco SD-WAN

Without Secure SDWAN

- **197 days** on average to detect a threat
- **More than 9% impact** on revenue, due to application performance issues
- **86 % of companies** that use manual policy inspection experience problems in over 10% of their change windows

Benefits and features

Benefits

- Increase user productivity by optimizing cloud and on-premise application performance with real-time analytics, visibility, and control.
- Centralize cloud management for easier deployment
- SD-WAN and security aligned to compliance policies across multiple sites.
- Protect users, devices, and applications by deploying embedded or cloud security faster with the best threat intelligence.
- Maintain flexibility with a cloud-first architecture to connect any user, to any application, across any cloud.

Features

- Complete transport independence
- Security at routing scale
- End-to-end network or VPN segmentation
- Centralized monitoring and management
- Visibility across hybrid WAN

Benefits and features

Cisco Viptela SDWAN platform (vEdge, ISR, ASR, ENCS, virtual) + DNA Essentials/ Advantage/Premier software subscription (three or five years)

.....
