Zero Trust Security
powered by Check Point

It's time to move to a real-time threat prevention technology and services, combining advanced security across networks, cloud and mobile

Cybercrime remains one of the top risks the world faces today. And the threat landscape continues to evolve.

The frequency of cyberattacks is increasing, with **95% of CIOs expecting** security threats to increase by 2022*.

Cybersecurity **maturity** ambitions outpace preparedness as the European region falls behind the global benchmark**.

Data protection and privacy regulations create **complexity and opportunity.**

As your **digital infrastructure grows,** so does your business' potential attack surface. But this doesn't mean business transformation must slow down.

The frequency of cyberattacks is increasing, with **95% of CIOs expecting** security threats to increase by 2022*.

Everything
**inside the perimeter
can** be **trusted**

Businesses today

The perimeter is
everywhere
who can I trust?

Does your business face one of these challenges?

Is your company unable to protect across the entire IT infrastructure? Are you having difficulty implementing a consolidated cybersecurity architecture, caused by disparate technologies?

Is your company moving to the cloud, or increasing adoption of cloud-based services, requiring cloud based security solutions to protect the cloud?

Is your company expending and does it need a security solution that will grow with you?

Does your company have a shortage of trained staff?

About Zero Trust Security Solution

At NTT we support business innovation, while managing risk with cybersecurity intelligence. Together with Check Point, we are launching our Zero Trust Security Solution, to prepare your clients for growth and help protect their network, endpoint, cloud and mobile - with a simple all-inclusive, per-user, per-year subscription.

Check Point Infinity is the first ever consolidated, security architecture across networks, cloud and mobile providing the highest level of threat prevention. They can manage mobile, cloud and network environments, protecting them with integrated threat prevention and with a security policy that expresses your business needs, as well as supporting the ebb and flow of cloud demand with auto scaling.

Through our NTT skills and expertise, we deliver integrated cybersecurity services. With unsurpassed threat intelligence, we help you to prevent, predict, detect, and respond to cyberthreats, while supporting business innovation and managing risk. Avoid downtime and build an agile and predictive security ecosystem across your users, devices, applications, and infrastructure.

We can help you establish cyber-resilience and active cyber-defense as well as a zero risk security platform

Cost
Balance security cost against business impact - control cost through an all inclusive cost per user, per year subscription

Complexity
Overcome complexity & fragmentation with a consolidated cybersecurity architecture

Compliance
Ensure that your business is fully compliant
