Disaster Recovery Automation Services

Automate key aspects of your recovery process and improve efficiencies

Our Disaster Recovery Automation Services allow you to streamline recovery processes across platforms, delivering availability and performance through our well-connected and secure infrastructure.

Service overview

Build and manage a robust disaster recovery (DR) system that delivers availability and performance within desired turnaround times.

The automation of key DR processes – including replication, workflows and failover – drastically reduces operational risks and increases efficiency, while advanced dashboards and on-time availability of sensitive data help to improve recovery point objective (RPO) and recovery time objective (RTO).

Our large, well-connected and secure infrastructure, distributed across multiple seismic zones, advanced automation and end-to-end managed services ensure that your critical systems remain available and responsive under the most adverse of circumstances.

Working with Zerto, we provide a highly effective cold DR solution – on-demand DR in the cloud. This agile solution helps you build high resilience into your IT infrastructure, with multicloud support. And, you can reduce total cost of ownership (TCO), since data gets replicated to a persistent storage and no compute resources are used at the DR site. In case of disaster, we can quickly spin up virtual machines (VMs) in fully functional mode with the required compute resources.

Our well-connected and secure infrastructure ensures that your critical systems continue to be available and responsive under the most adverse of circumstances.

Business outcome	Benefits
Reduce risk and meet targets	Real-time, continual monitoring and predictions of RTO and RPO
Simplify and accelerate DR	Use automated runbooks and processes with predefined workflows
Reduce recovery time	Recovery automation library patterns simplify complexity
Increase availability	Use intelligent workflow management to manage DR and resiliency

Intelligent workflow management for DR and resiliency

Wide array of tools

CloudEndure | Site Recovery | Velostrata | Doubletake | Zerto | Sanovi | Perpetuuti

Key service features

- Continuous data replication
- Enterprise-class disaster recovery tools
- Monthly disaster recovery as a service (DRaaS) service with subscriptions, including per VM per month
- Flexible billing model for infrastructure

Why NTT?

Global experience

More than 15,000 security engagements with clients spanning 49 countries, across multiple industries

Global track record

Decades of experience in providing professional support, managed and fully outsourced security services to over 6,000 clients

Expert skills

Highly certified security consultants with expertise across various infrastructures, systems and application technologies

Proven approach

Client-centric, pragmatic approach using proven assessments, methodologies, frameworks and best practices to deliver consistent, high-quality engagements
