Cloud Consulting Services

Hybrid Migration Assessment
Build your way to a Managed Services future

Gain clear insight into your current infrastructure and applications to create a **roadmap to Managed Services**

Our hybrid infrastructure and application assessment of your environment, providing valuable insights into your current status and a high-level roadmap to Managed Services.

Our Journey to the Cloud framework is designed to support you achieve your cloud adoption goals.
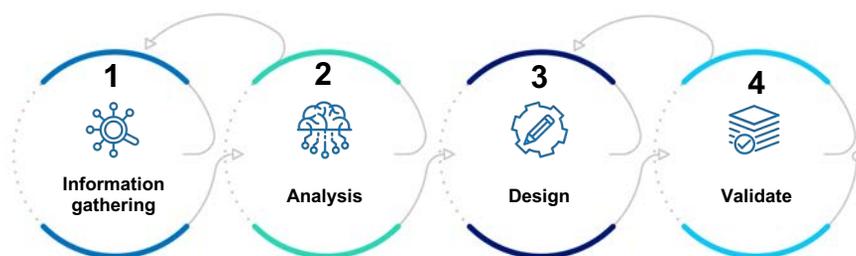

How we deliver

This assessment is conducted to review and analyze your infrastructure and applications delivering valuable insight into the current state of your IT landscape.

We will develop a high-level design and migration roadmap for moving assets into Managed Services on Hybrid Cloud through:

1. **Understanding** your business objectives.
   Information gathering workshops with technical and business stakeholders to help review documentation, architectural gaps, business goals and challenges.

2. **Analyze** your infrastructure and workloads.
   The information gathered is reviewed to determine if it is complete and free of any unexplainable abnormalities.

3. **Design** high-level infrastructure. Based on blueprinted solutions, NTT Ltd. applies best practices, identifies the best execution venue and target technology to meet your business outcomes.

4. **Validate** design matches business objectives.
   High-level design and roadmap are reviewed and refined in successive short meetings or audio calls until approved.

Business outcome	Benefits
Great insights at no cost	Free of charge for qualified clients
Quick delivery based on proven blueprint solutions	Thanks to a predefined approach and tools that provide quality and agility
Migration from any platform to any platform	Technology, platform and vendor agnostic
A recommended roadmap	We deliver a read-out to share the results of the engagement, recommendations and action plan

1 Information gathering **2** Analysis **3** Design **4** Validate

Valuable insight into your current infrastructure and applications to **provide a clear roadmap to Managed Services.**

Service	Key features
Migration from any platform to any platform	• Platforms supported include VMware, Azure, AWS, GCP, Nutanix and others • Technologies supported include IaaS, PaaS, Serverless and others • Containerization supported includes, but not limited to: Google Kubernetes Engine (GKE), Azure Kubernetes Service (AKS), Amazon Elastic Container Service for Kubernetes (EKS), Amazon Elastic Container Service (ECS), AWS Fargate, and Docker on IaaS virtual machines
Proven blueprints	Tried and tested blueprints based on best practices, certified products and years of experience
Risk mitigation	We have over 15 years of expertise in migrations to any platform
Top cloud partnerships	Highest level of partnership with major cloud vendors
