

Webex Hybrid Services

Enterprise communications and collaboration for the digital workplace

More and more organizations are choosing collaboration services from the cloud. Why? **Cloud services are easier and faster to deploy**, they don't require the upfront capital of on-premises systems and they can free up IT staff to focus on what matters most to the business.

Many organizations however, are unable, or do not want to move all their services to the cloud. Often, they are not ready to replace everything they have on-premises or they want to augment their current collaboration tools with those from the cloud. But having tools from both the cloud and the premises can create differing user experiences with tools that do not work together as one.

We solve this problem with Webex Hybrid Services. These services connect what you have on-premises, with Webex App in the cloud to provide a single, integrated experience. If you like the capabilities of Webex App, you can integrate those capabilities with what you currently deploy on-premises for an even better end-user and administrator experience.

Webex Hybrid Services are:

Webex Hybrid Directory Service

Webex Hybrid Calendar Service

Webex Video Mesh

Data Security

Single Sign on

Enjoy business benefits

Offering customers integrated communications touchpoints.

Compatible with Microsoft Exchange, Microsoft 365, Active Directory and Google Workspace.

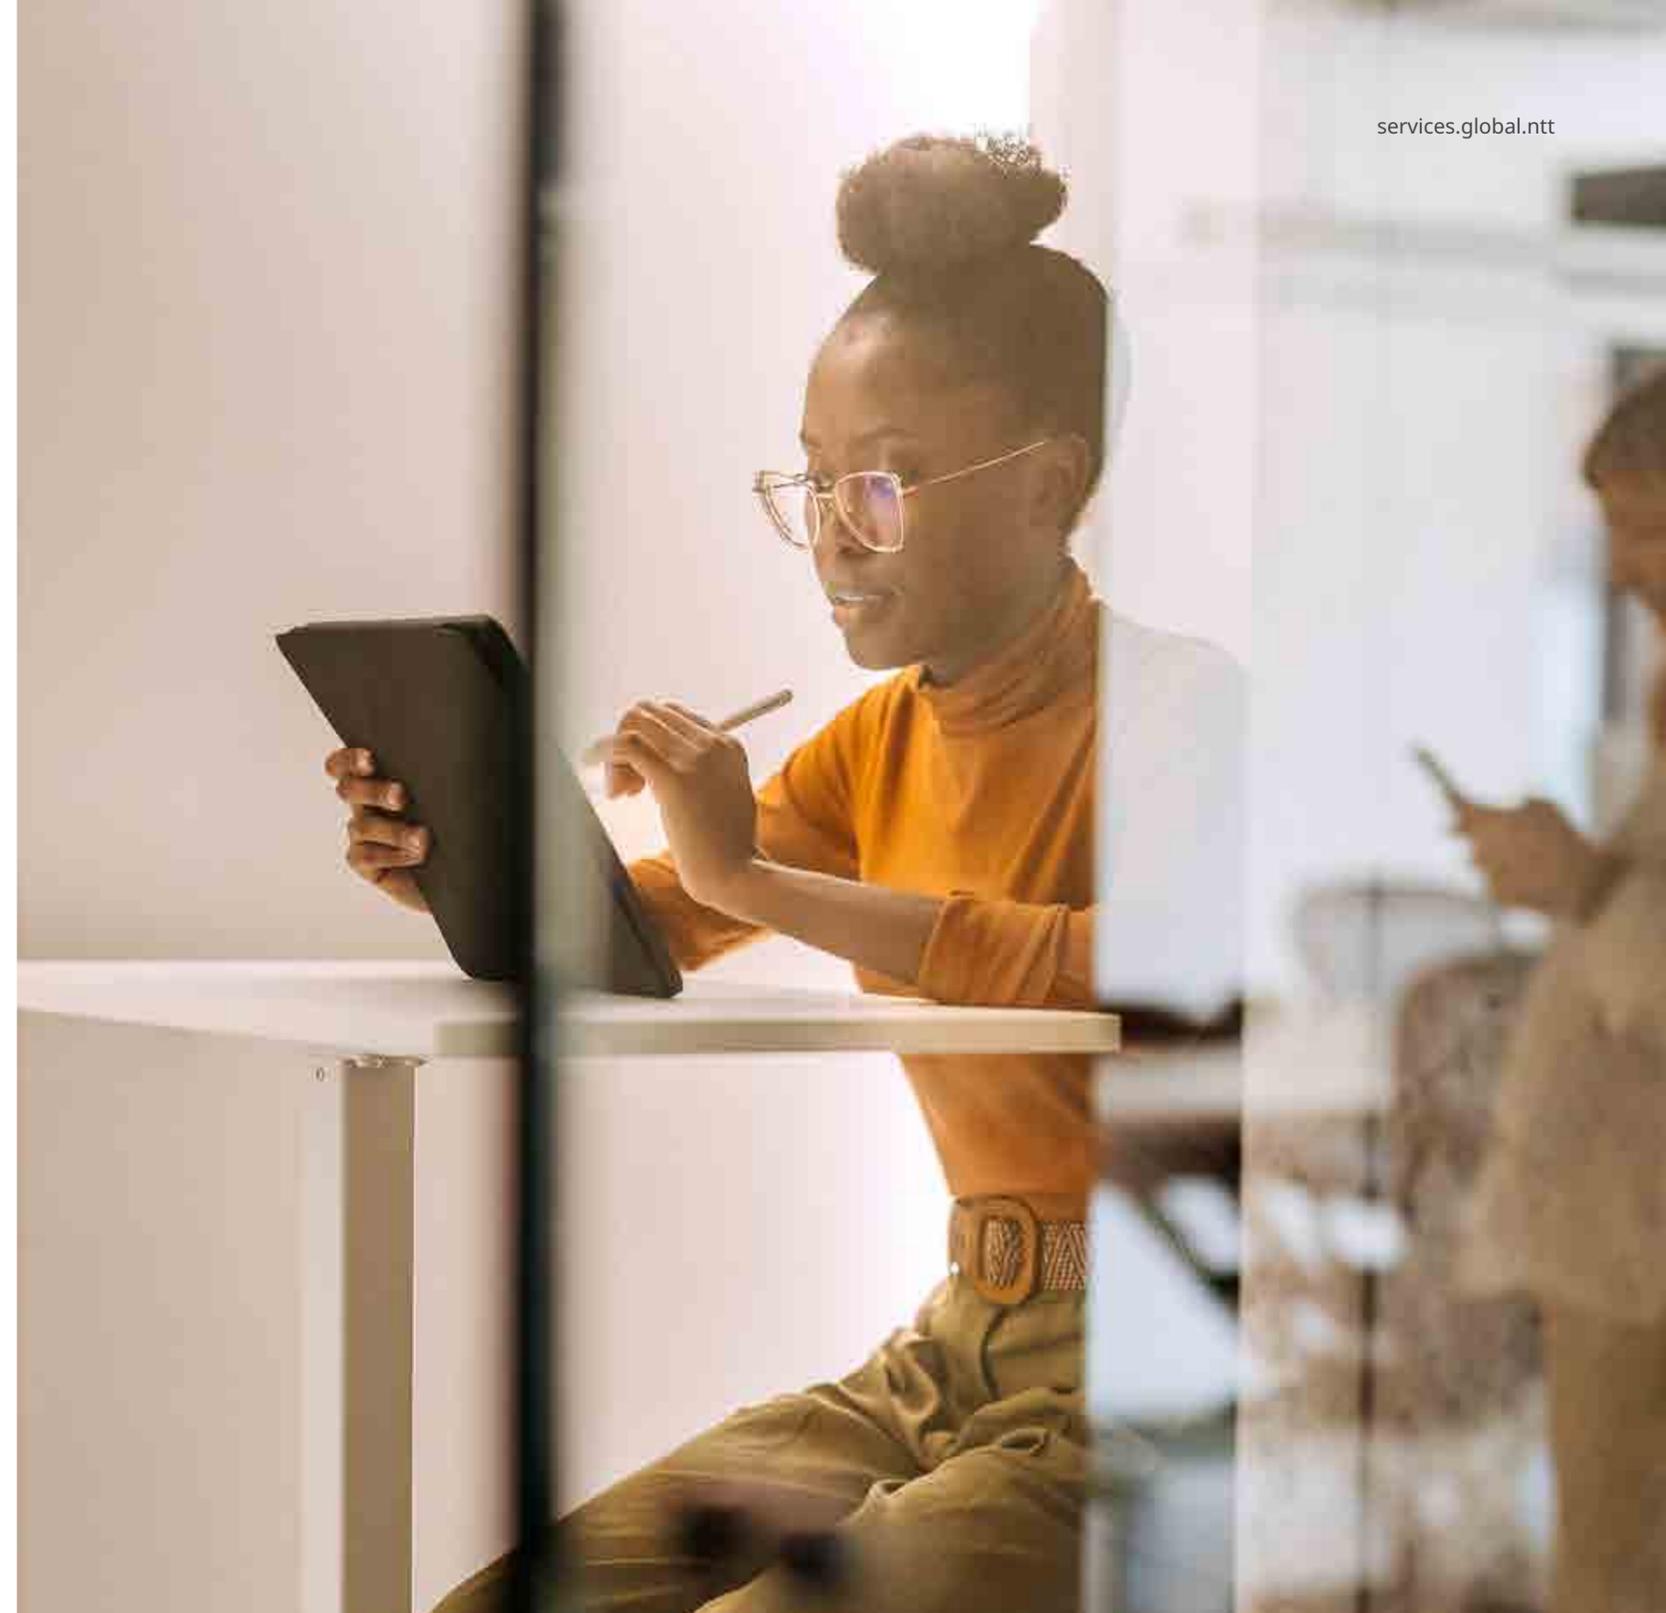

Use Hybrid Services to assist in your cloud migration at your pace.

Use Hybrid Services to find the optimal mix of on-premises and cloud conferencing resources for a high-quality user experience.

Manage the encryption key system and other security-related functions from the cloud to your enterprise data center.

Webex Hybrid Directory Service

Webex Hybrid Directory Service connects Microsoft Active Directory to Webex App and enables a user to see all company contacts in the Webex App so that they can click to meet, message, or call. Provide user synchronization between Microsoft Active Directory and Webex App user management.

Hybrid Data Security

Hybrid Data Security moves the Key Management Service and other security-related functions to your enterprise data center, so nobody but you hold the keys to your encrypted content. By default, all Cisco Collaboration Cloud customers get end-to-end encryption with dynamic keys stored in the cloud KMS, in Cisco's security realm.

Webex Video Mesh

Webex Video Mesh embeds Webex cloud services on your premises to unlock local media processing of video, audio, and content on the corporate network. Webex Video Mesh uses Webex's management system Control Hub to optimize network performance for your Hybrid Work investments. It provides cloud-based provisioning, metrics, and automated software updates. Mesh nodes are controlled by Webex in the cloud, so IT can focus on what's important.

Webex Hybrid Calendar Service

Webex Hybrid Calendar Service integrates your Microsoft and Google calendars with Webex App. Hybrid calendar services automatically creates a Cisco Spark space when scheduling meetings and makes it easier to schedule a meeting. Adding "@webex" to an Outlook or G Suite meeting invite will automatically schedule a meeting with join information in the meeting invitation.

Single Sign On (SSO)

Single Sign On (SSO) is supported by Webex Meetings and Webex App, allowing your users to use one set of login credentials (e.g., name and password) to access multiple applications within your organization. Webex Meetings and Webex App users will benefit from common login credentials eliminating further prompts when they switch applications during a session.

Cisco hybrid collaboration brings **cloud experiences** to your on on-premises deployment.

Why NTT Ltd.?

NTT specializes in unified communications, Cloud Voice and digital events, delivering tailored end-to-end consulting, deployment, and managed services to empower businesses and enable their digital workplace transformation.

The cloud continues to transform how business is conducted, with more innovative technologies and services being developed each year. We not only understand the technologies, but more importantly, appreciate how they can be used to empower an agile enterprise.

Placing the user at the center of all we do has been highly successful for the companies we have helped build their unified communications platforms. Our solutions offer an end-to-end service. Our approach enables our clients to build the perfect systems for their business, knowing they have experts supporting them every step of the way.
