Disaster Recovery Consulting and Managed Services

Resiliency underpinned by comprehensive disaster recovery services

Our comprehensive services cover all aspects of disaster recovery (DR), from planning and testing to ongoing management, helping to ensure business continuity and resilience at your organization.

Service overview

Our DR services are available as individual or collective managed services offerings. Whether your requirement is for independent DR infrastructure, DR automation services or end-to-end DR consulting and managed services, our solutions can fully equip your organization to hit the ground running.

We design solutions to meet your recovery point objective (RPO) and recovery time objective (RTO) needs with meticulous care and oversight. We also provide managed services support for all aspects of DR planning, testing and management.

Disaster Recovery as a Service (DRaaS)

Working with Zerto, we provide a highly effective cold DR solution – an on-demand DR in the cloud. This agile solution helps you build high resilience into your IT infrastructure, with multicloud support – and reduces overall total cost of ownership (TCO), since data gets replicated to a persistent storage and no compute resources are used at the DR site. In the event of a disaster, we can quickly spin up virtual machines (VMs) in fully functional mode with the required compute resources.

Our Disaster Recovery Consulting and Managed Services help ensure that your **critical systems are available and responsive, even in the most adverse of circumstances.**

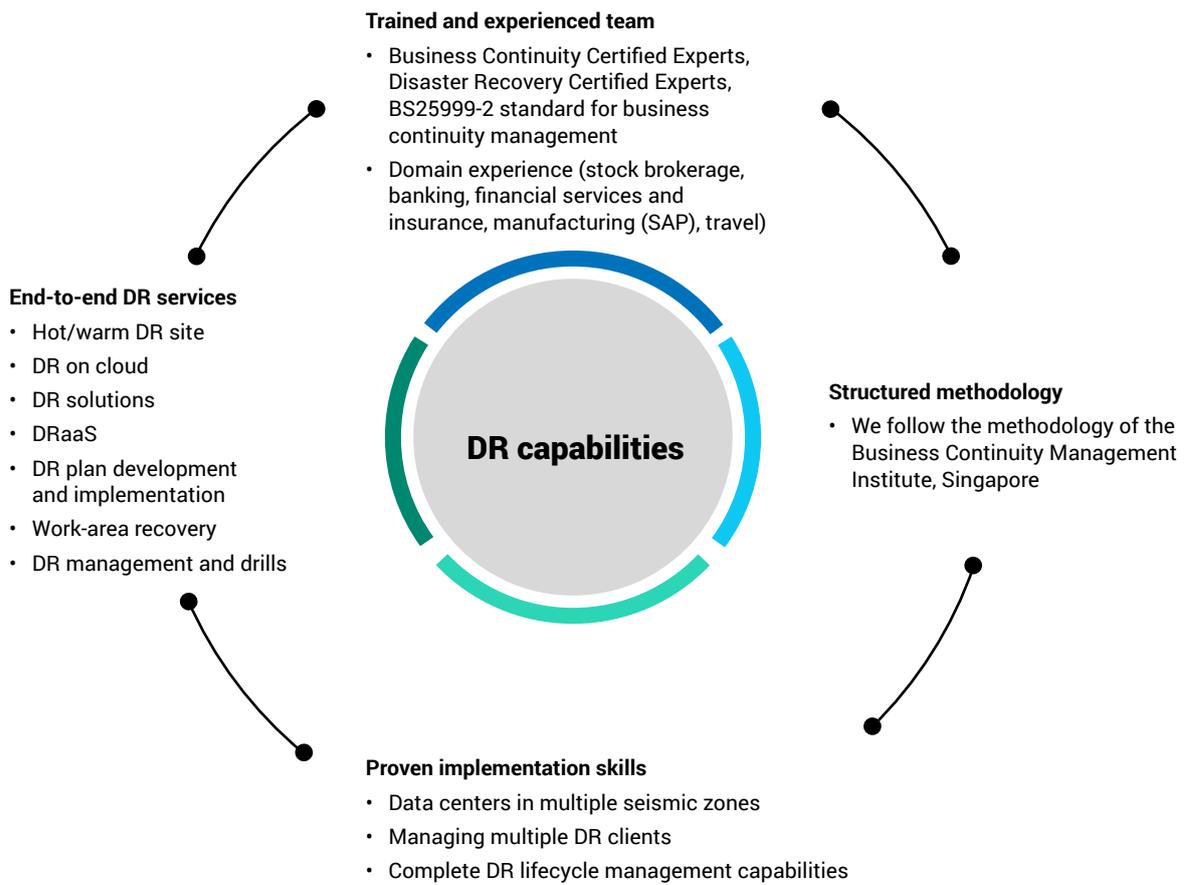

Business outcome	Benefits
Reduce risk and meet targets	Real-time, continual monitoring and predictions of RTO and RPO
Simplify and accelerate DR	Use automated runbooks and processes with predefined workflows
Reduce recovery time	Recovery automation library patterns simplify complexity
Increase availability	Use intelligent workflow management to manage DR and resiliency

How we deliver

Services are delivered through our ISO-certified 24x7 operations centers, supported by a dedicated team of experts along with designated DR managers. We follow mature processes based on industry best practices, ensuring high levels of availability and the protection of your important data.

We offer:

- Managed services for all aspects of DR planning, testing, and management
- DR drill and reports for compliance requirements
- 24x7 network operations center (NOC) and security operations center (SOC) operations, with SLA-backed services

Key service features

- Managed services for all aspects of DR planning, testing and management
- Highly available and flexible disaster recovery sites – private, public or hybrid cloud
- Single unified platform that provides continuous data replication with DVR-like capabilities to rewind and resume from available restore points
- Design solutions to meet RPO and RTO through meticulous planning, development and implementation services
- Pay-as-you-use monthly DRaaS for infrastructure, on a flexible billing model

Why NTT?

Global experience

More than 15,000 security engagements with clients spanning 49 countries, across multiple industries

Global track record

Decades of experience in providing professional support, managed and fully outsourced security services to over 6,000 clients

Expert skills

Highly certified security consultants with expertise across various infrastructures, systems and application technologies

Proven approach

Client-centric, pragmatic approach using proven assessments, methodologies, frameworks and best practices to deliver consistent, high-quality engagements
